SWARMING APPARATUS.

Description of One of These Valuable De-vices, With Instructions For Using It.

Almost every apiarist has his own peculiar notion as to how a summering device should be constructed. Some of these implements are very ingenious and valuable assistants during the swarming season. Their particular use is to remove a swarm after it has clustered and place it in the hive where it is desired that the new swarm shall take up its abode. A tripod apparatus known as Manum's device is a popular and practical one. It is simply a wire cloth cage fastened to a pole, with two legs so attached to the pole that they can be set out or in, something like a tripod. The lower and of the religious table in the control of the religious tripod. The lower end of the pole may be sharpened to stick in the ground, in order to steady the catcher and to prevent it from being tipped forward by the weight of the bees. The cage is 10 by 10 inches square by 134 thick and is covered on each side with wire cloth. It is made in two parts and hinged together so as to open and close. When closed, it is held together by a small hook. One of the parts of the head is fastened to the pole, forming a catcher. The head is made of seven-eighths by three-eighths stuff, hence is very light.

Mr. Marmon, who clips his queen's wings, proceeds to catch a swarm just coming out by opening the catcher and holding it to the entrance to catch what

A TRIPOD SWARMING DEVICE.

bees he can. Close it and lay it on the ground near by and watch for the queen. As she comes out, catch and put her in the catcher with the bees. Now set up the machine in some shady place, if convenient. The buzzing of the bees and the scent of the queen will soon attract the swarm, when all will alight on the catcher.

A. I. Root, who doesn't clip his queen's wings, describes in his A B C of Bee Culture a modification of the Marmon device. This modification differs in that he uses a larger wire cloth case, one containing several quarts of bees instead of one quart, as in the one described. In a drawing of this modified device No. 2 represents the wire cloth cage or basket; No. 3, the device in position, receiving the bees as they cluster on the outside of the cage. No. 1 shows the bees after they have clustered and the apiarist in the act of walking off to the

Harvesting the Corn Crop.

F. E. Emery of the North Carolina station writes: The simplest way to get the most food out of the corn crop is to cut close to the ground with short handled hoes at about the time the fodder would be pulled and cure in a silo. Lacking the silo, cut the corn in the same way a few days later or about the time fodder is generally pulled and shock in the field. Put 400 to 600 pounds in a shock and stand the butts out open enough to make the shock stand firm and let in the air to dry the corn. Bind the tops tight to hold together and keep out rain. When cured, shuck out the ears and cut what is left, known as stovers-the stalks, blades and shucks-into inch lengths. Feed to cows or work teams with cottonseed meal, wheat bran or such other nitrog enous materials as can be most readily obtained. For nearly balanced ration feed one pound of meal to four of stover and two of oat straw. The stover alone fed freely, will support an animal at rest and not giving milk.

Best Weather For Sugar Cane.

The experiments, investigations and observations made at the sugar experiment station, Audubon Park, La., led to the conclusion that a dry, warm winter, followed by a moderately dry spring, and this in turn succeeded by a hot, wet summer are conditions favorable to maximum growth of cane. It seems, too, that a dry, cool autumn, beginning early in September, is necessary to produce a large sugar content.

After the cane is laid by frequent showers of considerable intensity appear highly beneficial, and if not supplied the crop will not reach the maximum tonnage.

Notes of Local Interest.

Oemler says that a globular shaped onion will produce a crop one-third larger than one that is flat in form.

The returns show a slight general increase of area planted in cotton as compared with last year, due entirely to the increase in the states of Texas, Mississippi and Arkansas.

Texas is advancing in grape culture. Florida is making a decided success in pineapple culture.

Capingre is mentioned as a new staple crop for watern Texas.

At the Alabama canebrake station, on black bettom soil, haffir corn made a short, story growth and was not readily eaten by eattle.

The three experiment stations in Louislam are or united as a department of the Louisian state university and mechanical colline under act of congress of March 2, 1864. They have the same governing board and directors.

At the North Carolina station bordeaux mixture was successfully used to prevent peach rot. Three application are recommended-one before the budswell, another as soon as the bloom fall, and a third when the peaches a half grown.

SUMMER WARDROBES.

Fashion at a Standstill, but It Is Time to Wear and Enjoy.

Wear and Enjoy.

It is now the scason when fashion is nearly at a standstill. Summer wardrobes are all arranged, and it is too early to think of fall ones. Women want to wear and exjoy the pretty things they already have rather than go through the flery ordeal of shopping and being fitted. The odors of town, although quite as characteristic in their way, are less appreciated at present than the fragrance of sea and country places. The smell of pines or fresh search.

weed in the sun is better than all the manufactured essences in the market. If some one would only invent a method of bottling it up for winter use, the stock of potpourri jars would drop hopelessly.

The woman who is enjoying these scents at first hand is undoubtedly already provided with her outing suit of black, blue or brown serge, made with an unlined skirt and blazer or Eton jacket. Such a costume may be worn with a thick or thin bodice, as the weather demands, and will endure any amount of rough usuage, rain, spray and dust. She also has her dotted or flowered muslin gown much frilled and furbelowed, which she puts on after her return from boating or fishing excursions in the aforesaid rough and ready garments. A bath and a fresh dress are wonderful reviviflers after fatiguing exercise, so it is worth while, merely from a hygienie point of view to have several wonderful revivifiers after fatiguing exercise, so it is worth while, merely from a hygienic point of view, to have several nainsook gowns as prettily trimmed as one can afford. Of course she has a broad brimmed flower laden hat to correspond and long wash leather or silk gloves, as well as a white, scarlet or dark blue sun umbrella to keep the flowers on the hat from fading. She has not forgotten the light silk gown trimmed with lace for formal occasions nor the two or three evening gowns, one probably of black net or grenadine. In fact, it is doubtful if her wardrobe is not well stocked with most of the things in vogue just now, except possibly the newest inventions in cept possibly the newest inventions in gauzy arrangements to be work around the neck and shoulders. Something fresh the neck and shoulders. Something fresh in that line is continually appearing, and the latest is shown in the cut. It is of black mouseline de soie puffed over the shoulders and falling in two points in front. It is draped across the upper part of the chest and is collarless.

JUDIC CHOLLET.

SUMMER BOOKS. Judic Chollet Discusses Them With Her

Usual Good Sense In these days, when "novel" is merely an alluring name for an essay on social or medical problems flimsily covered by a transparent veil of narrative, like the gelatin coating of a quinine capsule, it is hard to find a book that may be read for the sheer pleasure of it, with no necessity for diving into the dark depths of science and ethics. Even the ordinary society love story, that once most popular of tales, has been thrust into the background by the

FOULARD GOWN

crowd of dissertations on brain wearying themes that beguile us into reading them by their specious claims to the title of light literature. There would be danger of a revolt in favor of dime novels if it were not possible to once in awhile get hold of such a story as Stevenson's "Treasure Island," full of delightfully unabstruse mutineers, buried gold and bloodshed, and so well written that the reader, like the recipient of Sam Weller's valentine, will "vish there yos more."

Without wishing to add another new crowd of dissertations on brain wearying

Without wishing to add another new theory to the innumerable host new buzzing like bees in different bonnets, it may be suggested that possibly some women have a lurking fancy for personal experience of moving accidents by flood and field, not as strong as the adventurous in stinct in men, but still strong enough to give a charm, in addition to its own charming style, to such a book as "The Admirable Lady Biddy Fane," for in-

If we could all live in caves for the next month or two, the interest in dainty summer gowns might relax a little. As we cannot do that, we must be content to read "Lady Biddy" on the veranda in the prettlest costume that the heat permits. A tlest costume that the heat permits. A sketch is given of a gown of old ross foulard. The round skirt, trimmed with four bands of white lace insertion, has a plain princess tablier in front, the left side of which is trimmed with black satin bows. The back and right side of the bodice are trimmed with three bands of insertion, while the left side is draped with white lace to match. The corsard opens in a Voyer a full plasten of white sile. white lace to match. The corse of in a V over a full plastron of white The elbow sleeves consist of two puffs finished by a lace flounce.
